Radial (2:47)

This is a radial MRI scan of the abdomen, showing a cross-section of the liver and surrounding structures. The image is characterized by a color scale where blue represents lower signal intensity and red/yellow represents higher signal intensity. The liver parenchyma is visible in the center, with various vessels and ducts branching out. The outer rim of the liver shows a distinct, slightly brighter signal compared to the internal tissue.

Radial (1:24)
